best of idea

The project has been developed by björn blisse, folker königbauer und reinhard zetsche- designers from germany and italy, who founded transalpin in 1999.

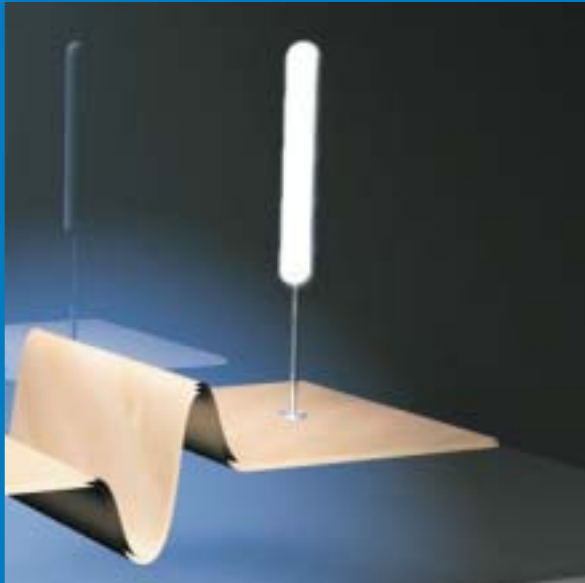

trans|alpin

Concept of this new material

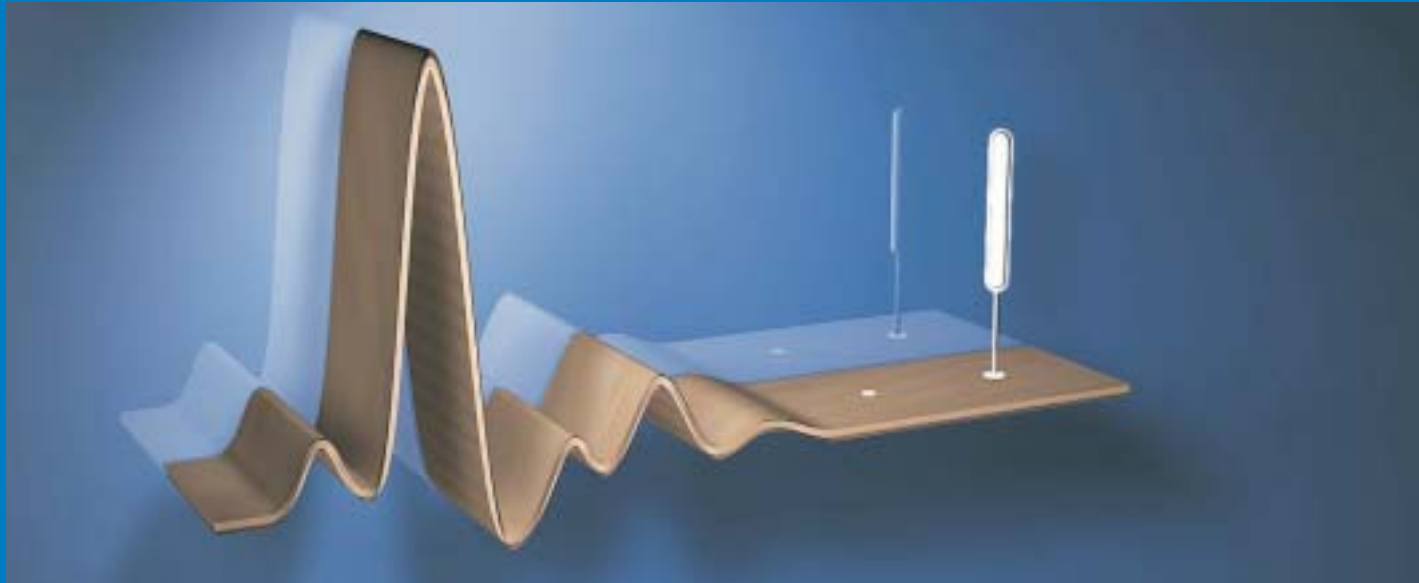

Preformed wooden elements with 2 layers, which can be electrified. One plug will be supplied with 12V current and to the other plugs, which can be distributed anywhere, you can put other elements, like lamps, ventilators or spots. This new material could be produced in plates as well as in preformed furnitures, like shelves, tables, lamps ...

Bench for public buildings

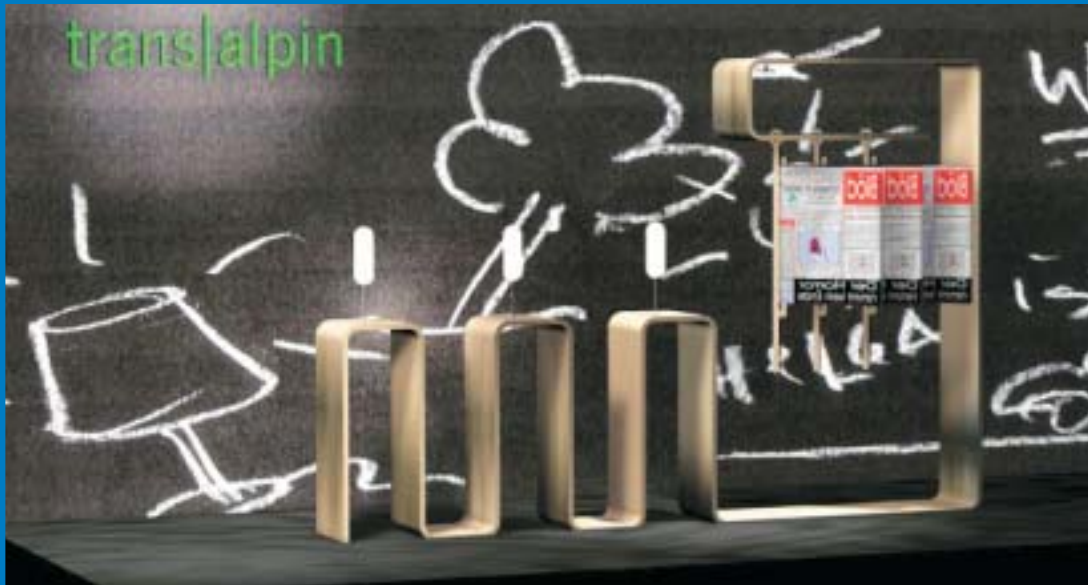

Heartbeat shelf with the shape of the ECG-curve

Library-chair for relaxing moments

Board for your home or waiting rooms

Bathroom furniture --> LOFT

Spirale unusual seating

Isola leisure island

Thanks for Your interest in transalpin
